CIPA task group 2 – report

Due to the researches that we are currently developing, our yearly report is quite short.

- Firstly, we are designing a new web site, which will be linked to the one of the School of Architecture, that is currently being migrated and updated.

- Secondly, we are designing the platform associated to our research project on Renewable Energies Impact, always using Open Source programs and datasets.

- Thirdly, we are publishing both the results and reports, that are being presented at some International Conferences and Workshops, as well as at some scientific journals. All those materials will be soon uploaded to the new web page.

It is a work in progress, that is currently at an intermediate stage. On the other hand, we are training a young researcher who is dealing with all the subjects related to the web site.
